[Timethy Hyman](https://www.linkedin.com/in/Timethy-Hyman)

TECHNICAL SKILLS

Programming Languages
C++, Rust, GLSL/HLSL

Graphics APIs
DirectX 12, Vulkan, OpenGL

Platforms
Playstation 5, PC, VR

Rendering Techniques
Ray Tracing, Deferred Rendering, PBR

Game Engines
Unreal Engine, Godot, Custom Engines

Advanced Topics
Volumetric Rendering, DLSS, Engine Development

LANGUAGE

English	Dutch
Papiamentu	Spanish

OTHER ACTIVITIES

Volleyball Coach
at Breda University of Applied Sciences where I help train the university team

Piano
as a hobby, I always enjoy working on learning new pieces

Side Projects
I like to explore new rendering techniques and try out different graphics programming ideas

ABOUT ME

I'm a 3rd year graphics programming student at Breda University of Applied Sciences who loves working on rendering engines and graphics technology. I enjoy diving deep into the math behind graphics and learning new techniques. Right now I'm at Traverse Research where I get to research and implement modern rendering methods. I have solid experience building custom engines from scratch and extending existing ones like Godot.

WORK EXPERIENCE

Graphics Programming Researcher

Traverse research
Current position

Working on research and development of advanced rendering techniques. I focus on implementing new algorithms and optimizing real time rendering pipelines using DirectX 12 and Vulkan. Get to work on cutting edge graphics tech and see it come to life.

Snipes supervisor & assistant

SNIPES Tilburg & Breda
2020-2025

I progressed from sales assistant to Supervisor, developing strong leadership and teamwork skills while supporting management with staff training.

EDUCATION

Bachelor of Science in Graphics Programming

Breda University of Applied Sciences
3rd Year Student

During this bachelor I focused on graphics programming, rendering techniques, and engine development. Heavy emphasis on math fundamentals and computer graphics theory combined with practical implementation.

Primary School Teacher Education (PABO)

Fontys University of Applied Sciences
2021-2023

During my time here, I developed strong communication, leadership, and teamwork skills, with experience explaining complex concepts clearly.

Advanced math

Fontys University of Applied Sciences
2020-2021

During this bachelor's program, I built the foundation of the mathematical knowledge I use today.

KEY PROJECTS

Voxel Based Volumetric Fog

Traversal Research
January 2026 - ongoing

Built a real time volumetric fog system with god rays using froxel based techniques. Created an atmospheric rendering system optimized for modern graphics pipelines with temporal reprojection for smooth results.

DirectX 12

Volumetric Rendering

Real time

DLSS Integration

Traversal Research
July 2025 - August 2025

Integrated NVIDIA DLSS into the Traversal rendering framework. Got it working with both DirectX 12 and Vulkan backends to boost performance while keeping visual quality high.

DirectX 12

Vulkan

DLSS

Performance

Ascension Protocol VR Game

University Project
June 2025 - July 2025

Made a complete VR game using our own custom engine. Handled all the graphics programming including the rendering pipeline, VR integration, and optimizing everything to run smoothly in VR.

Custom Engine

Game Development

VR

Raytracing in Godot

University Project
September 2025 - October 2025

Extended Godot Engine with hardware raytracing using Vulkan ray tracing extensions. Set up acceleration structures and shader binding to get real time ray traced rendering working in the engine.

Vulkan

Ray Tracing

Engine Extension

EV Engine

Personal Project
November 2025 - December 2025

Built a custom DirectX 12 rendering engine from scratch. Includes a modern rendering pipeline with descriptor management, resource state tracking, and various optimization techniques.

DirectX 12

Custom Engine

Rendering Pipeline

Deferred Rendering on PS5

University Project
September 2024 - October 2024

My first big rendering project where I implemented a deferred rendering pipeline on PlayStation 5. Got to explore console specific optimizations and learn about the PS5 graphics features.

PlayStation 5

Deferred Rendering

IBL

PBR

Wasteland Walkers

University Project
June 2024 - July 2024

Created a game in Unreal Engine with AI agents using machine learning techniques. Implemented MCTS (Monte Carlo Tree Search) for intelligent enemy behavior in a desert wasteland setting.

Unreal Engine

Machine Learning

Game AI

Voxel Software Ray tracer

University Project
September 2023 - October 2023

Built a CPU based raytracer from scratch. Implemented all the core raytracing algorithms including reflection, refraction, and various material types running entirely on the CPU.

Ray Tracing

CPU Rendering

Software Renderer
